

# Plants from pips

**With a bit of warmth, citrus plants can be grown from pips**

## What you will need

- Orange or lemon pips
- Small pot
- Good quality soil-based compost
- Plastic bag

## What to do

1. Make sure compost is damp.
2. Fill pot with compost to within 5cm of the top
3. Put a few pips into the pot and cover with 2cm layer of compost.
4. Cover pot with a clear plastic bag and put in a warm place. Seedlings will germinate in 2-3 weeks.
5. Bring the seedlings into good light as soon as any shoots emerge. Grow in a warm, light place.
6. Give liquid plant food occasionally. Keep compost damp.
